

RetinaXplain

Explainable AI-Assisted Diabetic Retinopathy Screening

Evaluation Performance on Project Dataset	Sensitivity: 95.29% Specificity: 99.14% AUC: 0.997
---	--

Report Information

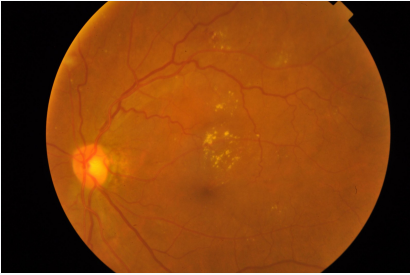

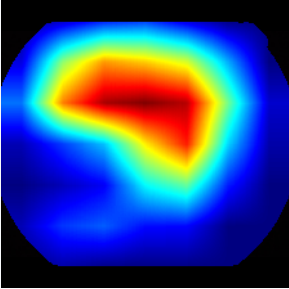

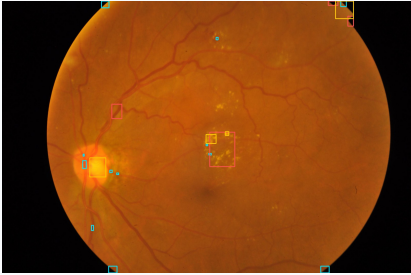

Date and Time of Analysis	13/09/2026, 22:34:05
Eye Analyzed	Both Eyes
Report Type	AI-assisted diabetic retinopathy screening

Screening Summary

Eye	Predicted DR Grade	Screening Category	Model Confidence
Left Eye	Grade 2	Referable	96.16% (uncalibrated)
Right Eye	Grade 0	Non-Referable	95.76% (uncalibrated)

Left Eye Analysis

Image Source: Original Image

Original Fundus Image	Grad-CAM Prediction-Relevant Regions	Lesion-Based Annotations
		

Grad-CAM highlights prediction-relevant regions, while lesion annotations show retinal lesion evidence detected by Module 2.

DR Severity Probabilities

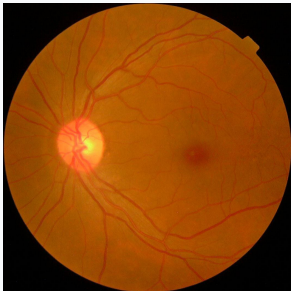

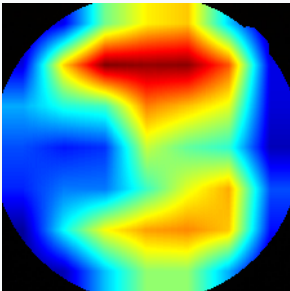

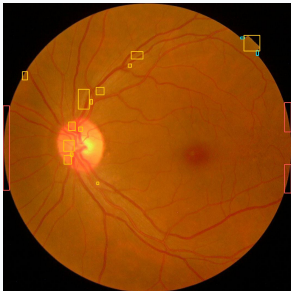

DR Severity Grade	Probability
Grade 0	0.00%
Grade 1	2.27%
Grade 2 [Predicted]	96.16%
Grade 3	1.10%
Grade 4	0.47%

Detected Retinal Lesions

Lesion Type	Relative Severity / Proportion	Count
Microaneurysms		17
Hemorrhages		5
Exudates		6

Right Eye Analysis

Image Source: Original Image

Original Fundus Image	Grad-CAM Prediction-Relevant Regions	Lesion-Based Annotations
		

Grad-CAM highlights prediction-relevant regions, while lesion annotations show retinal lesion evidence detected by Module 2.

DR Severity Probabilities

DR Severity Grade	Probability
Grade 0 [Predicted]	95.76%
Grade 1	3.04%
Grade 2	0.97%
Grade 3	0.16%
Grade 4	0.06%

Detected Retinal Lesions

Lesion Type	Relative Severity / Proportion	Count
Microaneurysms		2
Hemorrhages		3
Exudates		13

RetinaXplain — Clinical Findings & Recommendations

Report ID: RX-1789319045685 | Date: 13/09/2026, 22:34:05 | Eye Analyzed: Both Eyes

AI Screening Recommendation

Further ophthalmological evaluation is recommended. The screening findings indicate referable diabetic retinopathy in the left eye.

Clinician Comment

higj
